Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary Examiner Burton S. Mullins 2834 The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Art Unit: 2834

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- Claims 3-4 are rejected under 35 U.S.C. 112, first paragraph, as containing subject 2. matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not clear how one of ordinary skill would choose a suitable spring constant for the flexible, solid material to "govern" the pressure between the brush and the rim (claim 3) or "permit a preload pressure on the armature conductor turn to remain substantially constant as the material exhibits limited wear and deflection from external forces" (claim 4). No specific spring constants for the brushes are disclosed. The specification describes on p.12, line 32p.13. line that "Itlhe current collectors 132 are configured to exhibit a spring rate that results in an applied pressure on the armature conductor turn 120...." It is not clear what spring rate achieves this function, as no specific suitable spring constants are provided, either for copper fiber or copper foil brushes. Neither is it clear that the brush spring constant alone is responsible for controlling pressure. The "configuration" of the brush collectors includes brush shape or particular brush mount, both of which may have an affect on the applied pressure on the conductor turn. In the specification p.13, lines 7-23, it is suggested that flux return geometry, field coil configuration or a controlled atmosphere can contribute to the pressure. One of ordinary skill in the art would not understand from the specification how to

Art Unit: 2834

choose between one or a combination of these various possibilities for controlling the pressure between the brush and rim and thus fulfilling the functions in claims 3-4.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith (US 5,821,659). Smith teaches a homopolar machine comprising: shaft 11; an armature 15 coupled to shaft 11 and including plural conductor turns 21; outer flux return (shielding 49 with flux represented by arrows 51) enclosing the armature; plural stator-current collector arrays (slip rings 23) coupled to outer flux return and encircling the armature; each array including plural current collectors (slip ring brushes 23) in contact with the armature conductor turns 21 in the presence of high magnetic fields 51 to provide a sliding electrical current interface with the turns (c.2, lines 34-41).

Regarding claim 2, a portion (not numbered) of the outer flux return 49 directs magnetic field lines 51 substantially parallel to the (radially-directed) current flowing at the interface between collectors 23 and conductor turns 21.

Regarding claim 3, the brushes 23 inherently comprise "flexible, solid material" which bears against the respective outer conductor turn 21 "with a pressure governed substantially by a spring constant of the flexible, solid material."

Art Unit: 2834

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Stillwagon (US 4,271,369). Stillwagon teaches a homopolar machine comprising: shaft (not numbered); an armature comprising hollow cylinders 18 coupled to the shaft and including plural conductor turns (slip rings 38); outer flux return (stator 12) enclosing the armature; plural stator-current collector arrays (parallel, cylindrical conductors 72, c.6, lines 34-37) coupled to outer flux return and encircling the armature; each array including plural current collectors (brushes 40) in contact with the armature conductor turns via slip rings 38 in the presence of high magnetic fields (flux lines in Fig.2) to provide a sliding electrical current interface with the turns (c.6, lines 40-45; Figs.2-3).

Regarding claim 2, a portion of the flux path travels parallel to the current flowing at the interface between brushes and slip rings.

Regarding claim 3, the brushes inherently comprise "flexible, solid material" which bears against the respective outer conductor turn "with a pressure governed substantially by a spring constant of the flexible, solid material."

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/934,803 Page 5

Art Unit: 2834

7. Claims 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith or Stillwagon in view of Kuhlmann-Wilsdorf et al. (US 6,245,440). Smith and Stillwagon do not teach details of the current collector brushes (claims 5-8). Kuhlmann-Wilsdorf teaches metal fiber and foil brushes with low heat generation and low sliding wear rate comprising copper and copper alloys (c.10, lines 12-19; c.18, lines 30-36 and 50-64). Such brushes are applicable to high-current applications (c.24, lines 14-21). Regarding claim 4, brush preload pressure is recognized by Kuhlmann-Wilsdorf in that the advantage of brush fiber "spring" is suggested (c.13, line 67-c.14, line 2) and constant brush force is taught as being desirable for proper operation (c.24, lines 14-29). The force is kept constant by hydrostatic means employing liquid metal used at the same time for conducting current to and from the brushes (c.24, lines 45-61).

It would have been obvious to one having ordinary skill in the art to modify Smith or Stillwagon and provide brushes per Kuhlmann-Wilsdorf because brushes with low heat generation and sliding wear rates would have been desirable.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Burton S. Mullins whose telephone number is 305-7063. The examiner can normally be reached on Monday-Friday, 9 am to 5 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on 308-1371. The fax phone numbers for the organization where this application or

Art Unit: 2834

Page 6

proceeding is assigned are 305-1341 for regular communications and 305-1341 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 308-0956.
